How it works

Sorting rules

1. Total points: highest first (see next section for details of points)
2. Klass: A first ... E last

Tie-breakers:

3. Participation recency: This puts players who participated in recent tournaments first
4. Performance recency: This ranks by actual points earned in recent tournaments
5. Age tie-breaker: older players first
6. Total tournaments played: a player with fewer tournaments placed first

Sort by total points, then by class, then prioritize players who played recently AND performed well recently, with age and total games as final tie-breakers.

Points assignment

- For each tournament, group by Klass and sort by place, (scaled) points, and quality points (kv.p)
 - points are scaled by number of rounds since juniors and seniors may play different number of rounds
 - place sorts by individual performance between each pair of players
- Assign 11 STD points to median
- Assign 25 to first player, and 5 to last player no matter the group size
- Scale and assign the rest of the points within this range (scaling formula is explained below)
- E & F players are given 5 baseline points, and top 3 players get 8, 7, 6, points

Points scaling

- Within each klass sorted by p + kvp we calculate percentile placement (q)
 - How much better is this player compared to those who scored less?
- Formula: $q(i) = (N - i) / (N - 1)$, where N is total number of players
 - Mathematically, you always get 1, 0.5, 0 as the top, middle, and center percentile scores for players in each Klass
- 5 to 11 is 6 places, whereas 11 to 25 is 14 places
 - So, we scale these two "piece-wise" and round them to the nearest integer
 - top half get: $11 + 28 \cdot (q - 0.5)$ (i.e. 25 through 11)
 - players below median get $5 + 12 \cdot q$ (i.e. 10 through 5)

Synpunkter / Comments: [Ganesh Srinivasson](#)
